

Bartr

Discover. Exchange. Acquire.

The first stock market for the businesses that will never be listed.

33 million small businesses. None of them has a price.

If you wanted to buy a laundromat in Squirrel Hill tonight, you could not even find the list.

What Bartr is

Discover. Exchange. Acquire.

One place to find a small business, own a piece of it, and buy the whole thing. Nobody has built that exchange before.

Discover

Type "laundromat in Pittsburgh". Real businesses, read from the web, each priced with a range you can trust.

Exchange

Every business is 10,000 shares. Buy 20 of the laundromat on Murray Avenue. The owner sells 30% and keeps the keys.

Acquire

Want all of it? A letter of intent and a Pittsburgh diligence checklist, drafted with citations, in minutes.

Live book, countdown, order ticket

Every piece of evidence becomes its own estimate of value, with its own uncertainty. Precision weighted. Wider when they disagree.

$$\ln V \mid k \sim \mathcal{N}(\mu_k, \sigma_k^2), \quad k \in \{\text{listing, income, proxy, model, base rate}\}, \quad w_k = \sigma_k^{-2}$$
$$\mu = \frac{\sum_k w_k \mu_k}{\sum_k w_k}, \quad \sigma^2 = \frac{1}{\sum_k w_k} + \frac{\sum_k w_k (\mu_k - \mu)^2}{\sum_k w_k}, \quad V_q = \exp(\mu + \sigma \Phi^{-1}(q)), \quad \text{price} = V_{0.50}/N$$

Squirrel Hill Wash and Fold

Income	4.0x SDE \$152k, haircut, reviews	\$588,544	σ 0.25
Model opinion	Grok, web search	\$560,000	σ 0.45
Base rate	category median, PA index	\$469,480	σ 0.70
Posterior		\$570,768	σ 0.22

Range \$474,782 to \$686,160. The range, not the point, sets the owner's quotes.

A business with only a Google pin gets σ 0.82. The model refuses to be confident, and the market shows it.

Estimators run only when their evidence exists. Multiples from BizBuySell 2026, sold at 0.88 x asking. Sigmas calibrated on real listings with the price hidden. Grok and K2 disagreement widens the model term. Φ^{-1} inverse normal CDF, $N = 10,000$ shares.

The owner is the other side. The platform never trades.

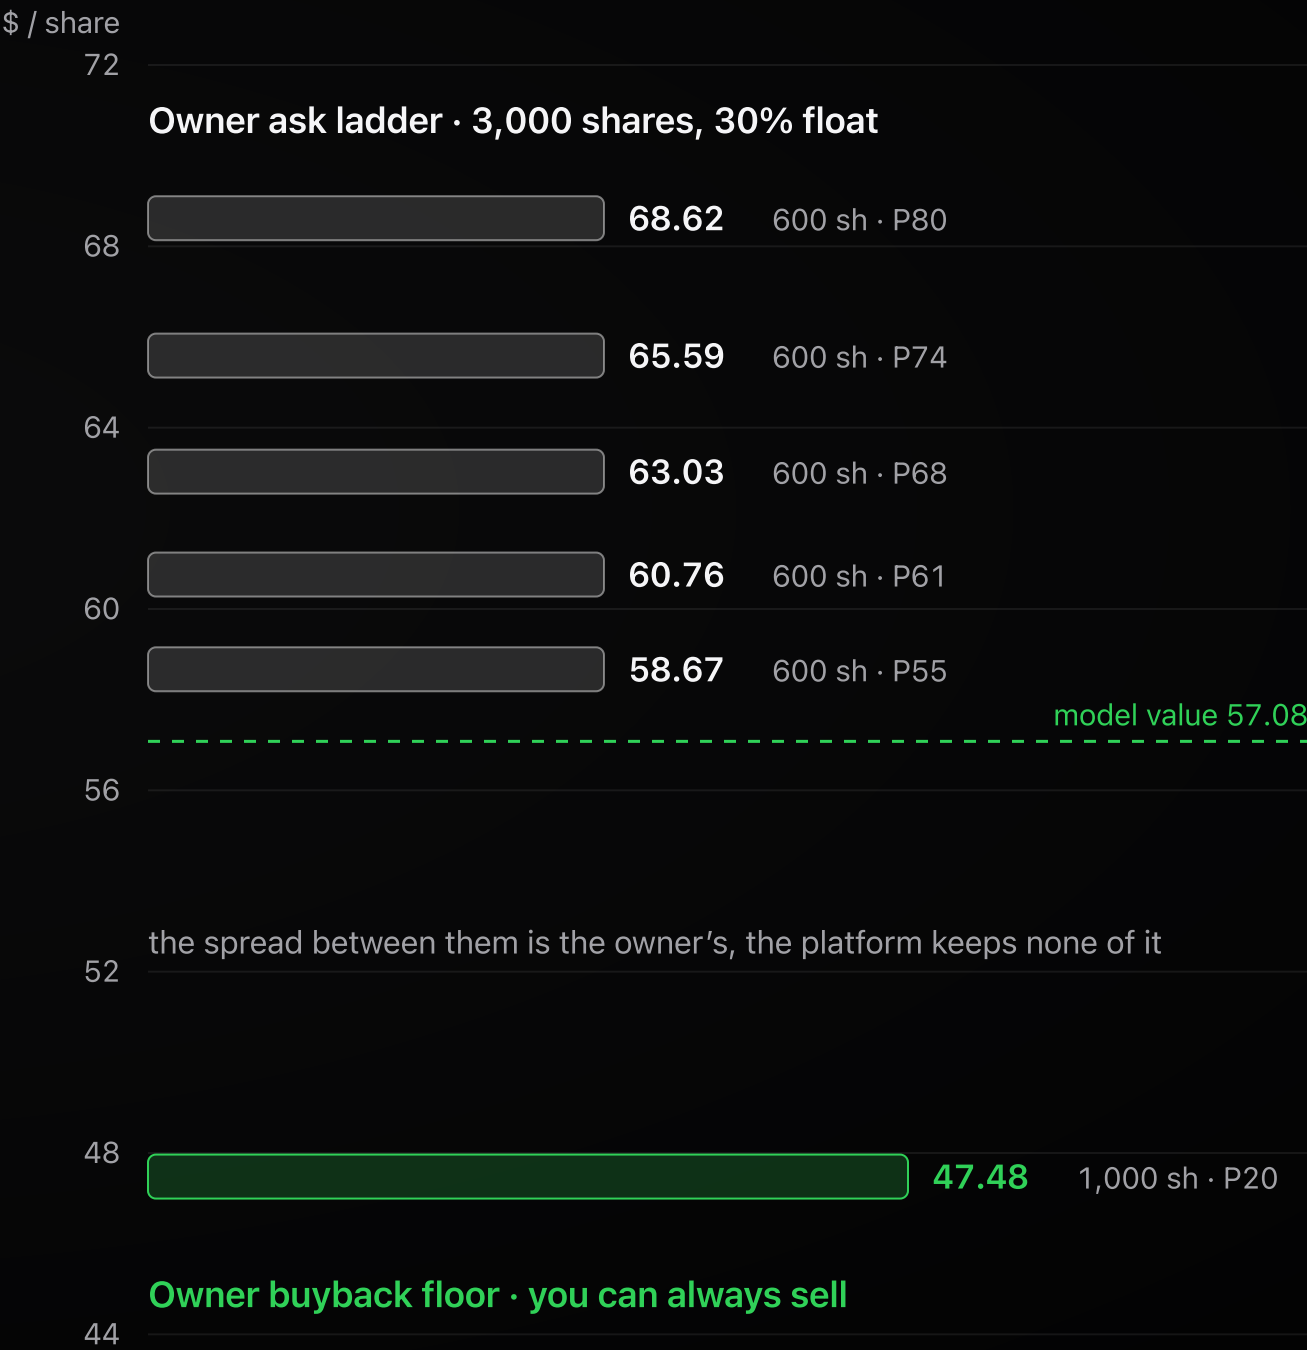

Ask ladder. 3,000 shares offered at five prices, the P55 to P80 quantiles of the valuation. Buy while float remains.

Buyback floor. A standing bid for 1,000 shares at P20. You can always exit.

One price per round. Every 10 seconds the book clears at the price that maximizes traded volume. Everyone gets the same price. No market maker, no house inventory.

$$p^{\star} = \arg \max_p \min\{D(p), S(p)\},$$

$$D(p) = \sum_{\ell_b \geq p} q_b, \quad S(p) = \sum_{\ell_s \leq p} q_s$$

QR

scan and bid

Fair by construction.

No continuous matching, so speed buys nothing. The owner requotes only between rounds, never bids above its floor, never asks below P55, so the account that holds the float cannot chase the price. Server timestamps only; orders are immutable, cancels are new events.

Built for you to make money.

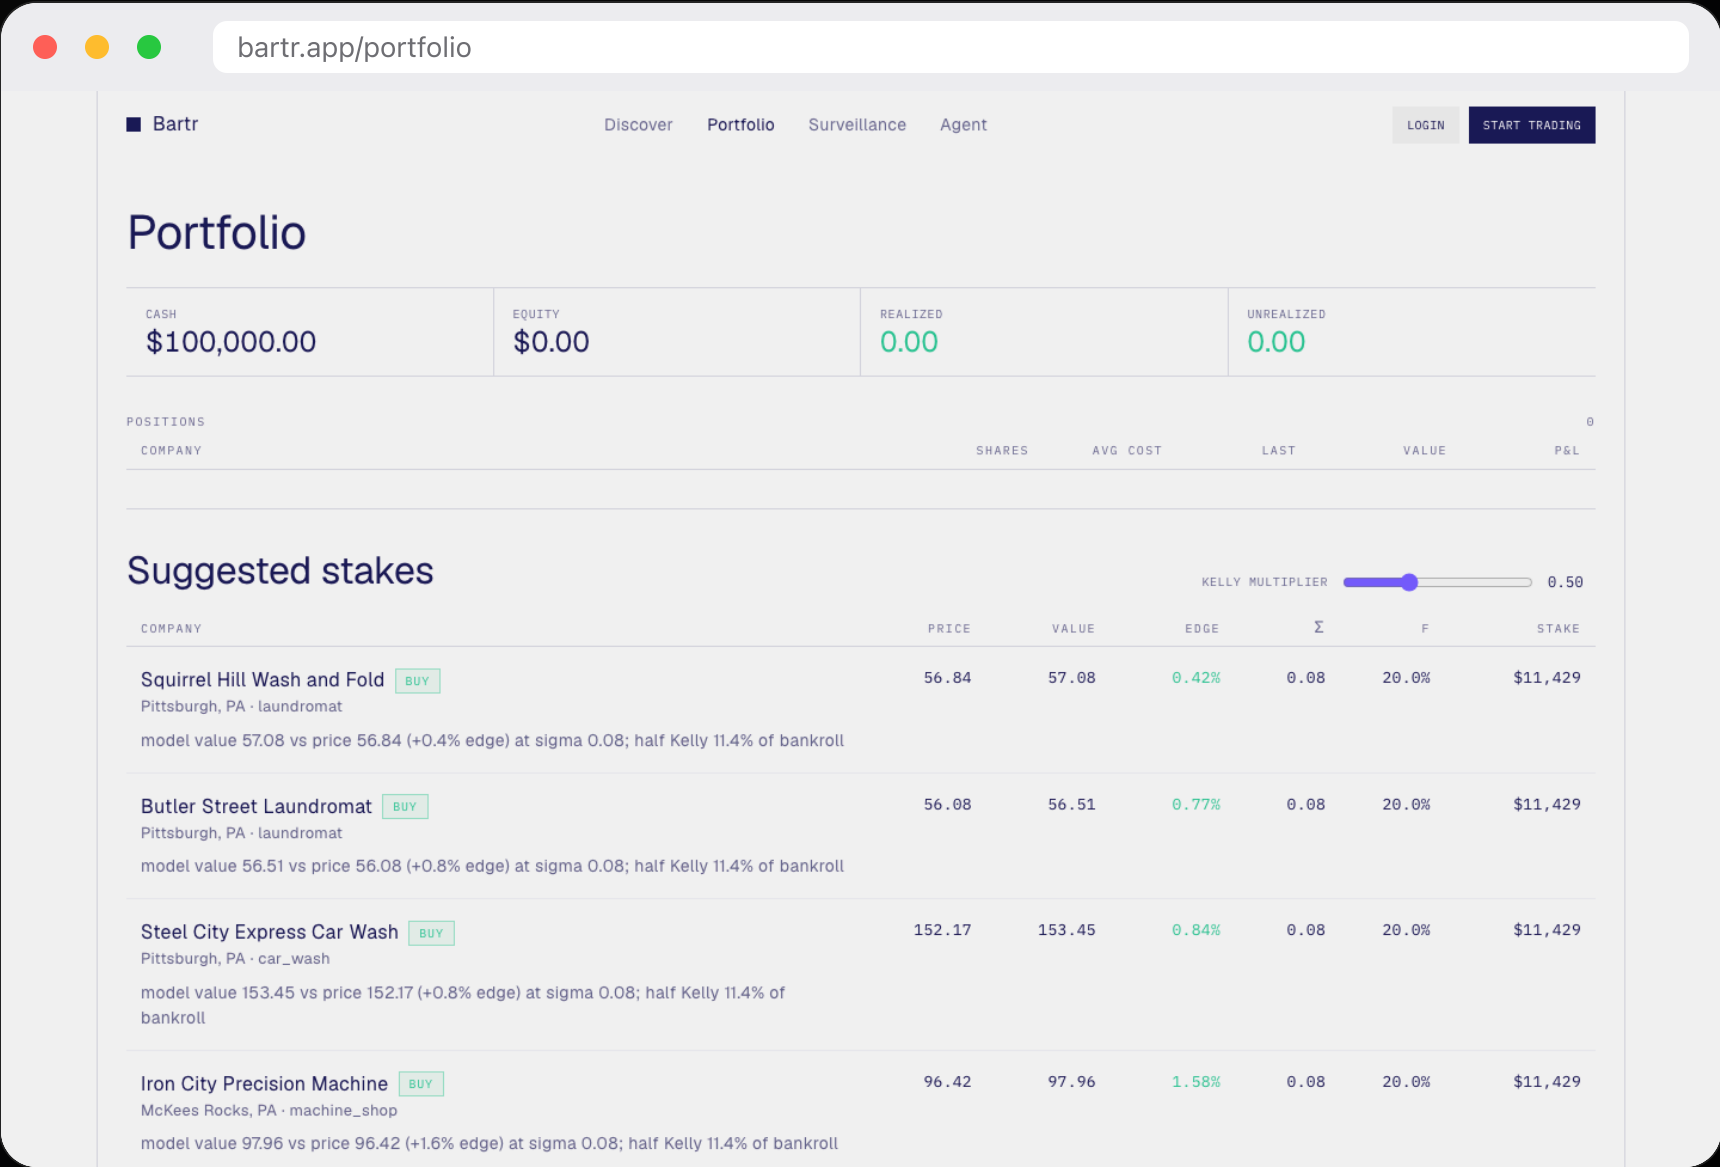

Edge on every suggestion. Model value against market price, shown in the open. We publish what we think it is worth.

Your risk, your dial. A Kelly multiplier from 0.25 to 1.0 sizes every stake to your appetite. Default is half Kelly, because the edge is an estimate.

Always an exit. The owner's floor is a standing bid. We are never your counterparty.

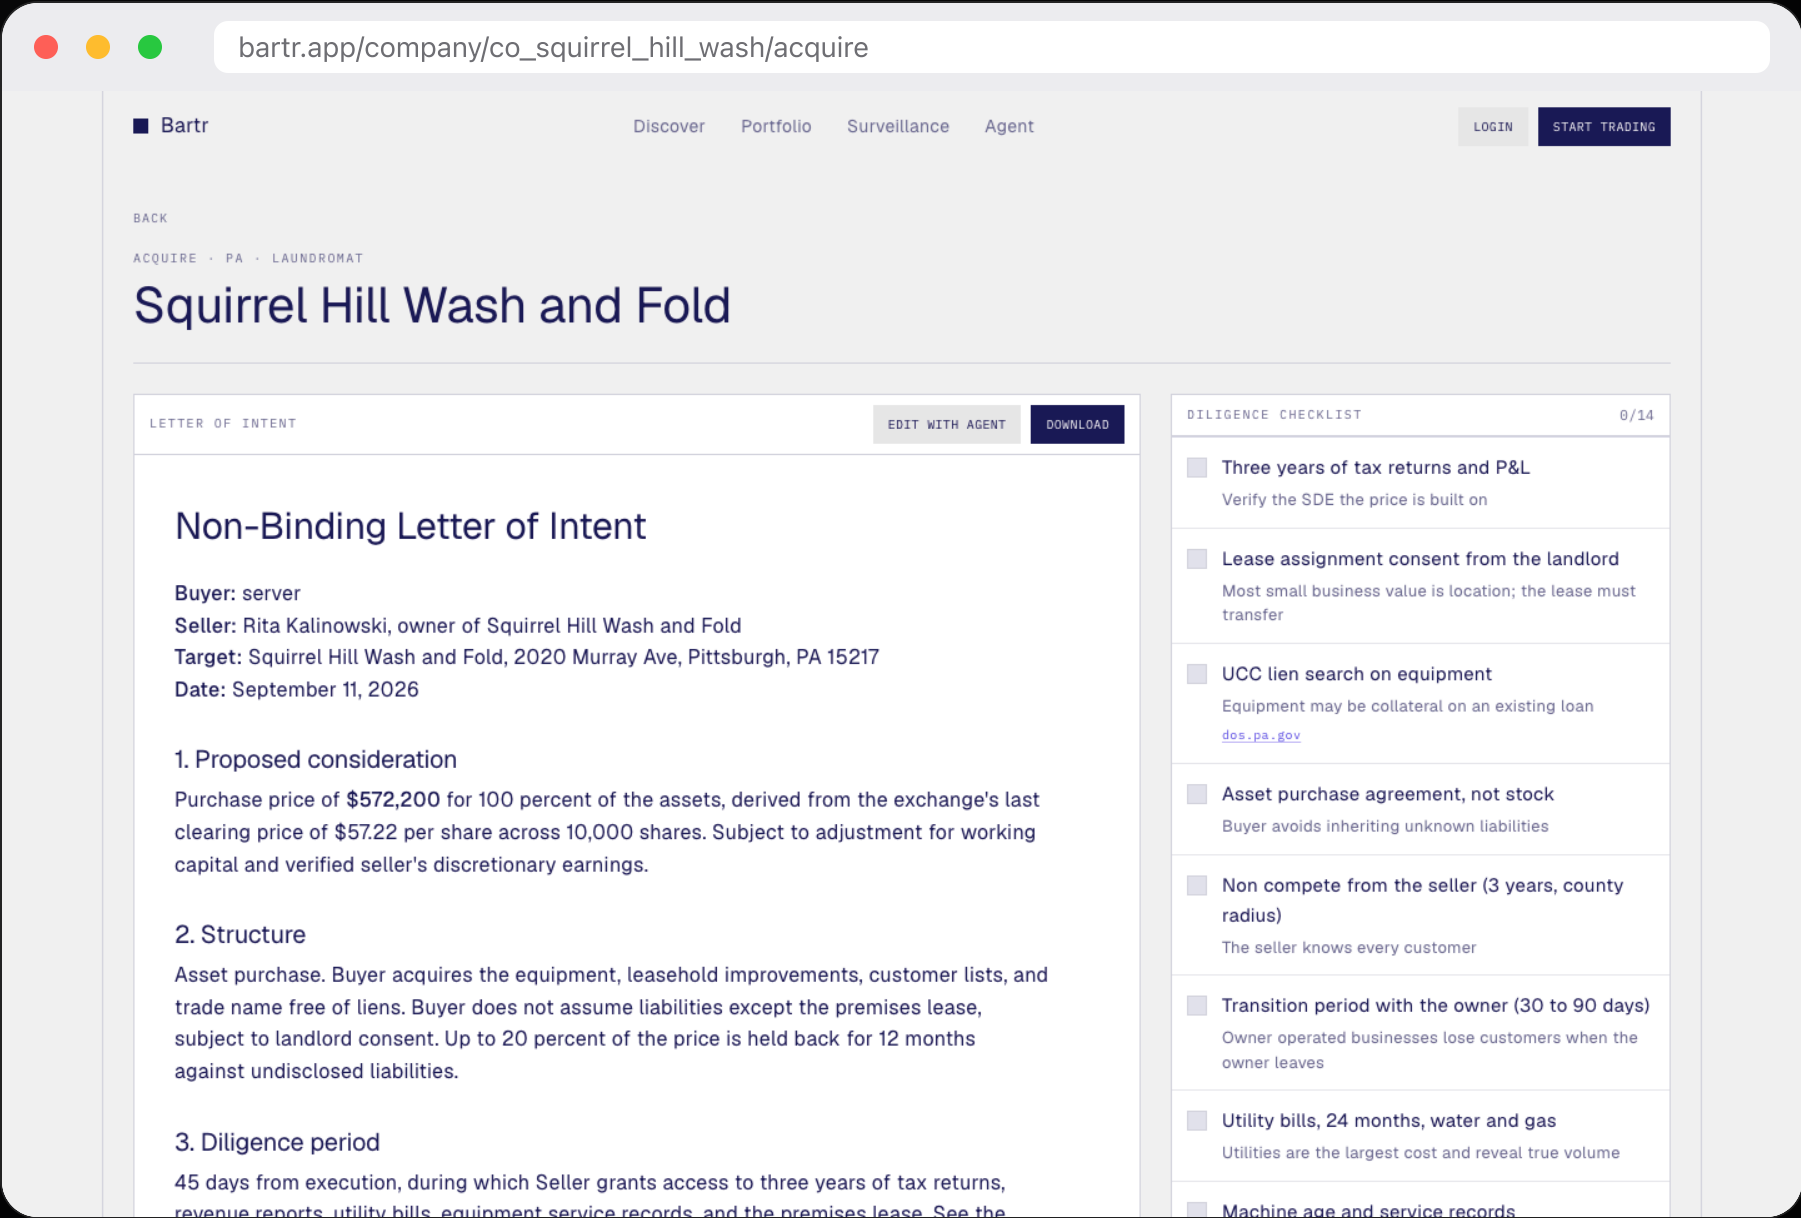

$$\mu = \ln \frac{v}{p}, \quad f = \text{clip}\left(m \cdot \frac{\mu}{\sigma^2}, 0, 0.20\right), \quad \$ = f \cdot B$$

v model value, p price, σ uncertainty, m your multiplier, B bankroll

From a share to the whole company.

Letter of intent, drafted from the clearing price
City of Pittsburgh business registration
Allegheny County Health Department permit

Every trade is reviewed by a panel of AI agents.

● **Flagged** wash trade, round 14

Rules: bot_17 and bot_23 have traded 9 times and only with each other.

Grok explains

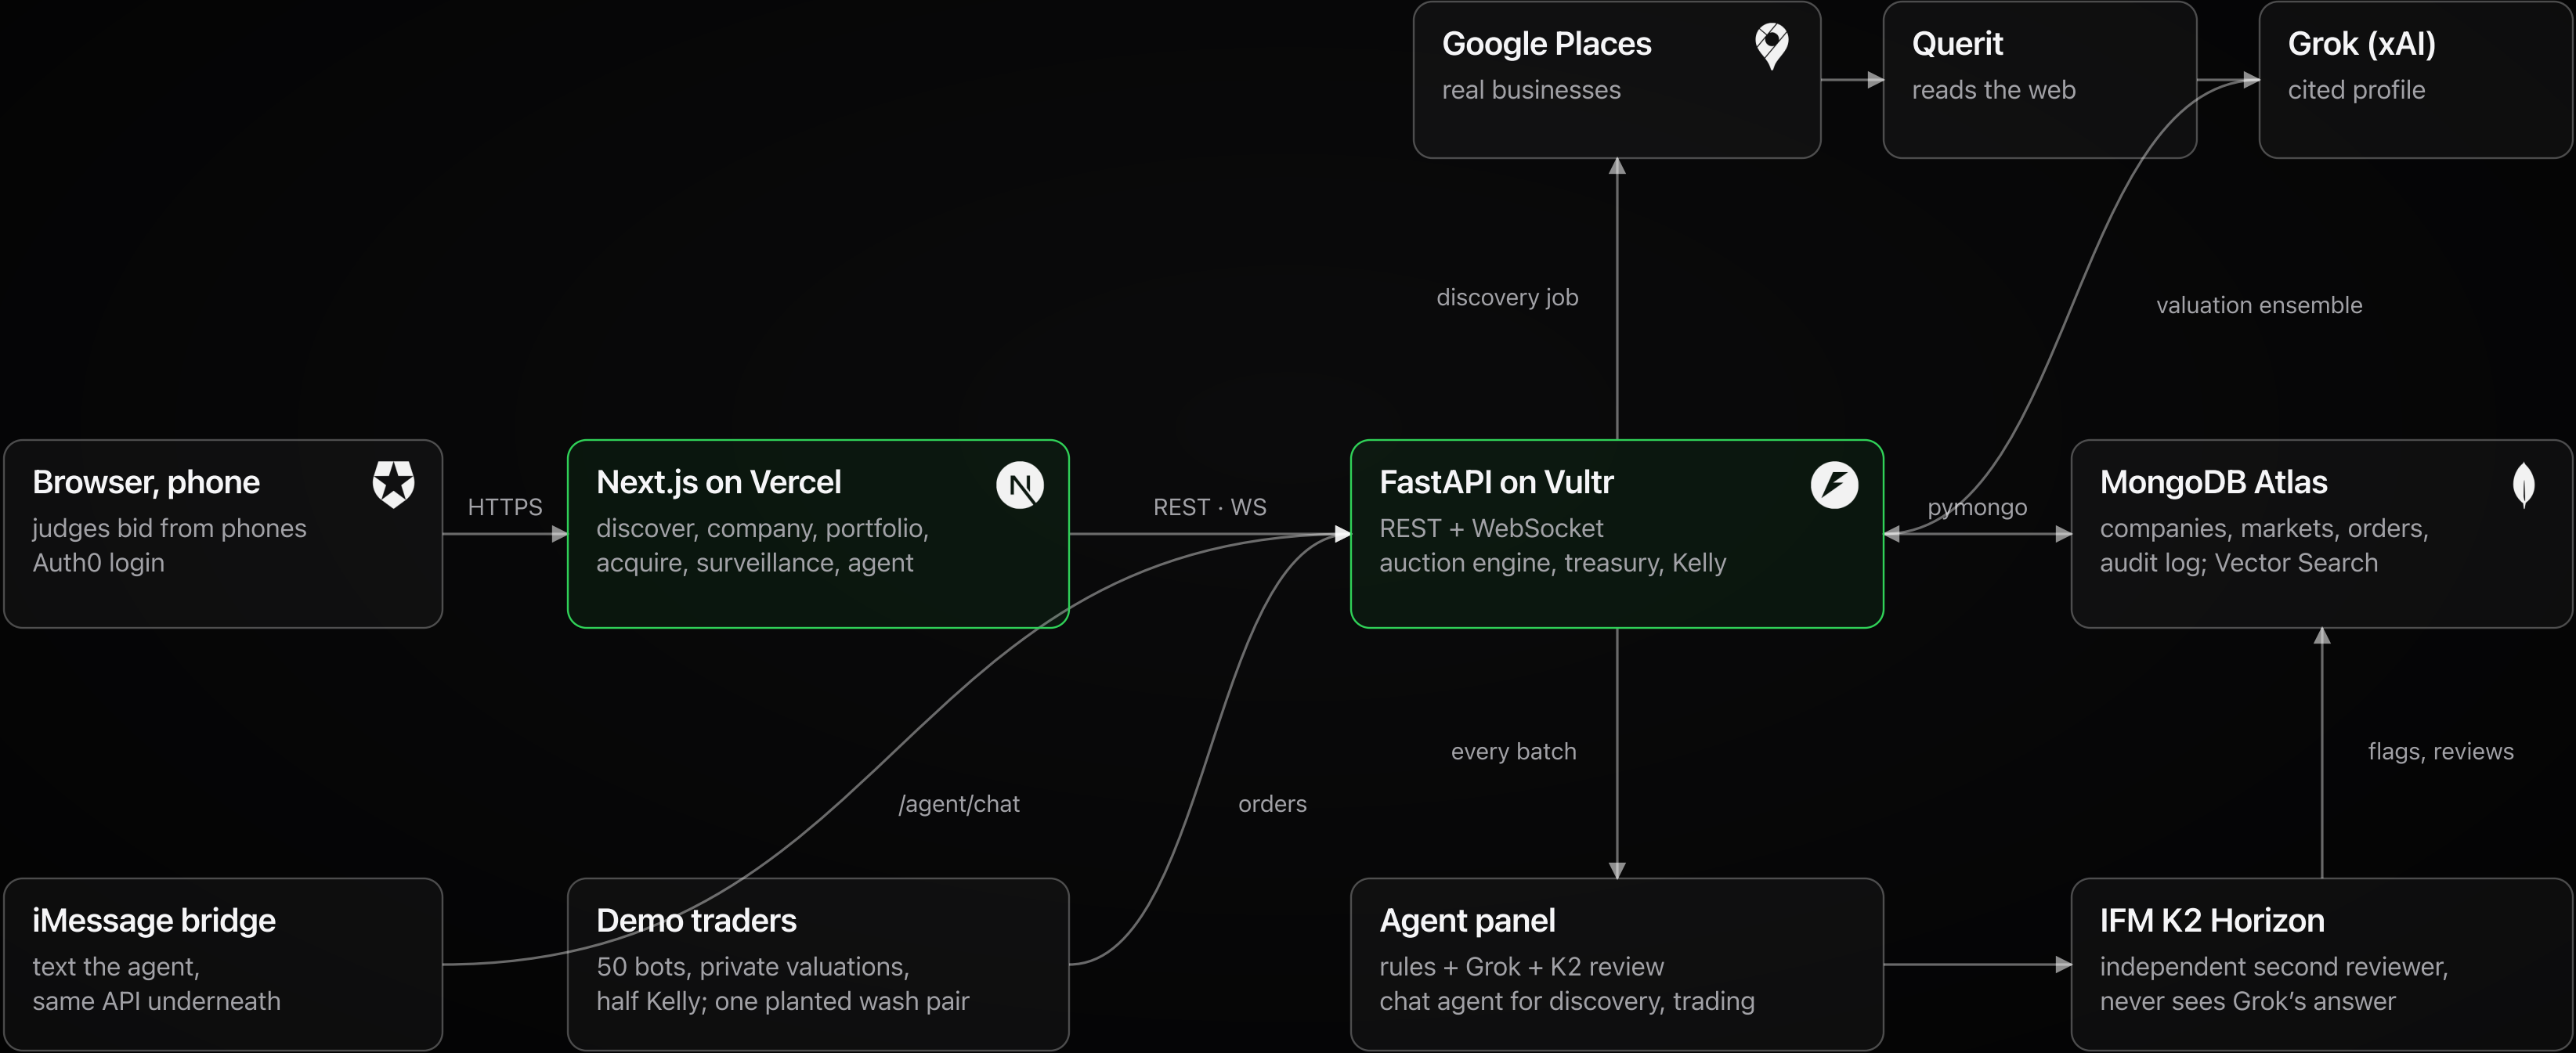

"Alternating sides at the clearing price, volume prints without ownership changing. No economic purpose."

K2 concurs, 0.94

Orders cancelled, accounts frozen, entry written to the immutable audit log. Disagreement is shown, never hidden.
